SUMMARY

Agentic AI Engineer and AWS Certified Solutions Architect - Associate specializing in enterprise AI. Delivering AI agent proof-of-concepts evaluated by Microsoft stakeholders for production, working directly alongside Solutions Architects at HCLTech. Experienced in multi-agent orchestrations and LLM applications across Azure OpenAI and Google ADK

EXPERIENCE

AI Engineer, Agentic AI – HCLTech | Redmond, WA

Feb 2026 – Present

- Partnered with Solutions Architects and Microsoft leads to deliver 3 customer-facing AI agent POCs, translating enterprise pain points into working demonstrations supporting HCLTech's pre-sales motion
- Architected HCLTech's Agents Marketplace, a platform enabling the Sales team to showcase 94+ AI agent solutions, run personalized client demos, and let stakeholders test agents, supporting targeted pre-sales opportunities

Data Engineer Intern – Texas A&M University | Remote, San Jose, CA

Aug 2025 – Feb 2026

- Designed a medallion architecture data lake on AWS S3, building dual ingestion pipelines from Bright Data and Reddit PRAW API to consolidate research data across two datasets into a unified bronze-to-silver layer
- Built a Reddit scraper with company alias and keyword matching across 25+ subreddits, implementing a checkpointing mechanism to resume from failed fetches, ensuring pipeline stability under rate limits
- Enriched subreddits of unstructured text with VADER lexicon-based sentiment scoring and GPT/Gemini LLM tagging to derive thematic and demographic features for time-series analysis

Software Engineer - LTIMindtree | Mumbai, India

Jan 2021 – Jun 2023

- Contributed to an SAP to AWS migration by building ABAP batch export jobs to extract procurement, sales, and finance data into S3, supporting a centralized Redshift data warehouse serving 1000+ business users across EMEA and NA
- Redesigned an SAP inbound message monitoring tool to support 25+ business-driven filter combinations, reducing a 10-step manual process to a single-click workflow
- Led SDLC release audits across 7 global teams, coordinating between developers, change managers, and the change governance team to enforce release standards and eliminate undocumented production changes across 52+ releases

PROJECTS

ApartmentFinder – AI Agent for Relocations | [Link](#) | Google ADK, Langfuse, Cloud Run, Agentic AI

- Designed a hierarchical multi-agent system orchestrating apartment research, commute analysis, and neighborhood safety scoring into ranked relocation recommendations
- Implemented a 3-tier listing provider chain (RentCast, Apify Zillow, CSV fallback) with Google Maps Distance Matrix integration for real-time commute calculations
- Added observability to a 4-agent AI pipeline by implementing distributed tracing (Langfuse), achieving 100% coverage of agent behavior, tool calls, and model responses - cutting debugging time for latency and failure issues

AWS Point-of-Sale (POS) System | [Link](#) | AWS EC2, MariaDB, MongoDB, SQL

- Built a POS database on AWS EC2 with MariaDB, implementing ETL, stored procedures, triggers, and primary/peer-to-peer replication for horizontal scaling
- Migrated the schema to MongoDB by modeling denormalized JSON documents, evaluating relational-to-NoSQL tradeoffs for read-heavy query patterns

EDUCATION

Texas A&M University | Master of Science - Management Information Systems

College Station, TX

Coursework: Data Management, Systems Analysis & Design, Human-Computer Interaction

University of Mumbai | Bachelor of Technology - Electronics & Telecommunications

Mumbai, India

Coursework: Database Management Systems, Object Oriented Programming, Machine Learning

SKILLS

Programming: Python, SQL, JavaScript, TypeScript, React, FastAPI, HTML, CSS, ABAP, Git, Shell, Bash

AI: LLM, RAG, Google ADK, Microsoft AI Foundry, LangChain, OpenAI API, Azure OpenAI, MCP, Claude Code, Cursor

Cloud: AWS (EC2, S3, RDS, Redshift), Azure (Container Apps, Blob Storage, AI Foundry), GCP (BigQuery, Cloud Run), Docker

Database: MySQL, MariaDB, MongoDB, ChromaDB, Pinecone, Cassandra, SQLite
